

Challenge Message for Time Travelers

Hello readers from the future!

If you really are readers from the year 2125 (or whenever your future may be), this is a random message and experiment from me, an ordinary person in the year 2025.

Who am I?

Vincent, 19 years old

Tangerang, Indonesia

Written: October 7, 2025, at 1:32 a.m.

So basically:

This is a small experiment, inspired by *Stephen Hawking*. If you really exist and can send messages to the past, please send me an email (you can use Google email or Outlook, if they still exist haha, those are the only ones I have) or you can also send me a DM on Instagram (if it still exists in the future :D) briefly at the exact time I wrote above.

Instructions:

1. Send an email to one of these addresses (any one will do):
vincent.paskawijaya@gmail.com
vincentpaskawijaya26@gmail.com
(if one service is no longer available in the future, try another address)
2. Or send a message to my Instagram account (Alternative):
[@vincentpaskawijaya](https://www.instagram.com/vincentpaskawijaya)
(If my Instagram service/account still survives in the future, or my username doesn't change)
3. Exact delivery time on: October 7, 2025, 4:00 am.
(If you submit before or after that, this experiment is invalid for time proof purposes).
4. Subject of the message: FROM THE FUTURE
Email content: just one short line, e.g. "Hello! I'm from the future"
(don't explain tech/identity details! Just code & confirm, I want to keep the timeline)

Short rules (please read):

1. One email/DM per sender. Do not spam.
2. If you're a prankster today: please don't participate in sending it at that time, it's an experiment, not a prank.
3. If you claim to be from the future but don't include "FROM THE FUTURE" in the subject/content, your message won't be considered proof.

Note on publication (what I will do):

I will not publish this instruction before the specified time.

After that time & date has passed, I will upload this PDF to the Internet Archive as documentation of the experiment (so that anyone in the future can check if an email arrived on time).

So if an email arrives at that time, it will be solid evidence, not a prank from someone now.

Why do I ask for only one line?

To keep the explanation short and your privacy safe. I want proof of communication, not details that ruin your timeline.

Okay that's all. If someone actually sends it, thank you very much. If no one does, that's fine too, at least our idea was tried :D

That's it, that's all. Greetings from 2025.
